

## TR2 – Contrôle TP

Remarque : Tous les fichiers modifiés pour le TP sont inclus dans le .zip

### Exercice 1 :

#### Fichiers :

##### **Resolv.conf**

```
nameserver 172.31.25.155
```

##### **Named.conf.options**

```
options {
    directory "/var/cache/bind";

    forwarders {
        172.31.23.10;    // forwarding vers les Dns de l'IUT
        193.49.62.9;
    };

    dnssec-validation auto;

    auth-nxdomain no;    # conform to RFC1035
    listen-on-v6 { any; };
};
```

##### **Named.conf.local**

```
//include "/etc/bind/zones.rfc1918";

zone "25.31.172.in-addr.arpa" {    // Création de la zone inverse, dans le fichier « db.172 »
    type master;
    notify no;
    file "/etc/bind/db.172";
};

zone "memoire50.local" {    // Création de la zone dans le fichier « db.memoire50.local »
    type master;
    file "/etc/bind/db.memoire50.local";
};
```

## db.memoire50.local

```
$TTL 604800
@      IN      SOA  alzheimer.memoire50.local. admin.memoire50.local. (      // Déclaration
du Start of Authority et de l'@ de l'administrateur
                                2          ; Serial
                                604800     ; Refresh
                                86400      ; Retry
                                2419200    ; Expire
                                604800 )   ; Negative Cache TTL
;

@      IN      NS   alzheimer.memoire50.local.      // Déclaration de la machine en tant
que DNS
alzheimer      IN      A      172.31.25.155          // ajout de la machine 'alzheimer' au DNS
```

## db.172

```
$TTL 604800
@      IN      SOA  alzheimer.memoire50.local. admin.memoire50.local. (
                                1          ; Serial
                                604800     ; Refresh
                                86400      ; Retry
                                2419200    ; Expire
                                604800 )   ; Negative Cache TTL
;

@      IN      NS   alzheimer.
155    IN      PTR  alzheimer.memoire50.local.      // ajout de 'alzheimer' à la zone de
requête inverse
155.25.31.172.in-addr.arpa. IN      PTR  alzheimer.memoire50.local.
```

## Commandes :

```
dig -x 172.31.25.155
; <<>> DiG 9.8.1-P1 <<>> -x 172.31.25.155
;; global options: +cmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 20896
;; flags: qr aa rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 1, ADDITIONAL: 0

Oct 19 09:19:55 lr2-00 named[5535]: managed-keys-zone ./IN: loaded serial 2

Oct 19 09:19:55 lr2-00 named[5535]: running

## Exercice 2 :

### Installation :

```
Sudo apt-get install apache2
Sudo apt-get install subversion
Sudo apt-get install libapache2-svn
```

```
mkdir /var/svn           // création du dossier où seront stockés les projets
sudo svnadmin create /var/svn/mem50      // Création du projet 'mem50'
```

### Configuration :

**/etc/apache2/mods-available/dav\_svn.conf**

```
<Location /svn>           // spécifie l'adresse d'accès Web à Subversion (ici, 'localhost/svn')

    DAV svn                // Activation du module dans Apache

    #SVNPath /var/lib/svn

    SVNParentPath /var/svn    // Adresse des dépôts
    SVNListParentPath On      // active l'affichage de la liste des dépôts à 'localhost/svn'

    #AuthType Basic
    #AuthName "Subversion Repository"
    #AuthUserFile /etc/apache2/dav_svn.passwd

    #<IfModule mod_authz_svn.c>
    #AuthzSVNAccessFile /etc/apache2/dav_svn.authz
    #</IfModule>

    #<LimitExcept GET PROPFIND OPTIONS REPORT>
    #Require valid-user
    #</LimitExcept>

</Location>
```

Après le redémarrage du service, on obtient à l'adresse 'localhost/svn' :

Rem : il faut également attribuer à Apache les droits d'accès au dépôt :

```
chown -R www-data:www-data /var/svn/mem50/
```

### Activation de l'authentification :

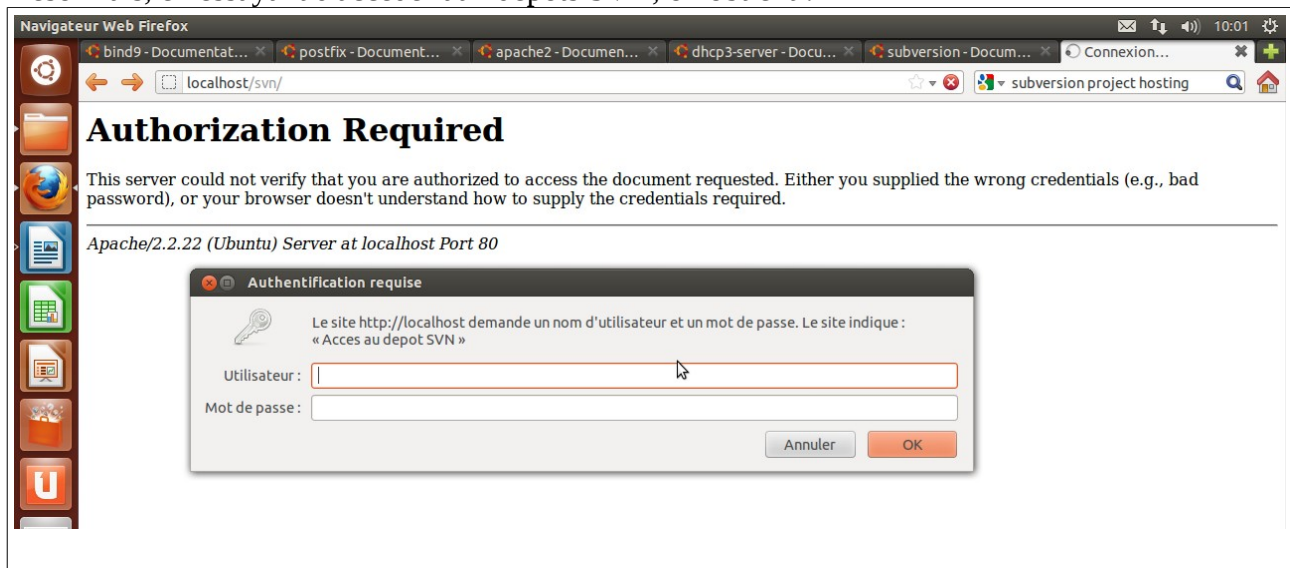

Lignes à ajouter au fichier '**/etc/apache2/mods-available/dav\_svn.conf**'

```
AuthType Basic           // affichera un prompt lors de l'accès aux dépôts
AuthName "Accès au dépôt SVN" // message affiché par le prompt
AuthUserFile /etc/apache2/dav_svn.passwd // fichier contenant les user/password autorisés
Require valid-user
```

Commandes :

```
htpasswd -cs /etc/apache2/dav_svn.passwd rt50-01 // création de l'utilisateur « rt50-01 »
htpasswd -s /etc/apache2/dav_svn.passwd rt50-02 // création de l'utilisateur « rt50-02 »
chown www-data:www-data /etc/apache2/dav_svn.passwd // définir Apache comme
propriétaire du fichier
service apache2 restart // Redémarrage pour appliquer les modifications
```

Désormais, en essayant d'accéder aux dépôts SVN, on obtient :

### Sources documentation :

<http://doc.ubuntu-fr.org/subversion>

<http://subversion.apache.org/docs/>

man chown

man svnadmin

## Exercice 3 :

### Installation :

Impossible : le proxy bloque l'installation des plugins Eclipse (aussi bien via le marketplace que manuellement)

( Tentatives avec :

iut-rt/proxy.pac

iut-rt/proxy.pac:80

iut-rt.univ-artois.fr/proxy.pac

iut-rt.univ-artois.fr/proxy.pac:80

cache-etv.univ-artois.fr

cache-etv.univ-artois.fr:3128 )
